NEW ACQUISITIONS

TUNNEL MAINTENANCE

The ICM Group was awarded the safety and consolidation work connected with Autostrade's Tunnel Assessment on the A30 section: Caserta-Salerno-Montagna Spaccata Tunnel.

The activity essentially includes the performance of anchoring riveting works on the tunnel cladding, the filling of cavities in the cladding extrados, the restoration of the deteriorated reinforcement cover and reinforcement structure by milling and hydrodemolition, the control of water in the cladding creating new drains, as well as the application of protective meshes and metal sheets in the cladding.

The Company has also won significant maintenance contracts for the tunnels of the Genoa and Como sections.

LOGISTICS IN PIACENZA

We are present in Piacenza for the realization of a Logistic Platform, called “Macroarea T1”, whose project foresees the realization of two buildings with a useful surface of 46,000 square meters, equipped with offices and services. The structure of the building is essentially made up of precast reinforced concrete elements; the structures of the service volumes, as well as the foundations, the panel-holding elements, etc. are all made of reinforced concrete in situ. The roof has several skylights and to make them safe the application of a wire mesh is foreseen. As regards the external arrangement of the site, a car park, roads and green areas are planned.

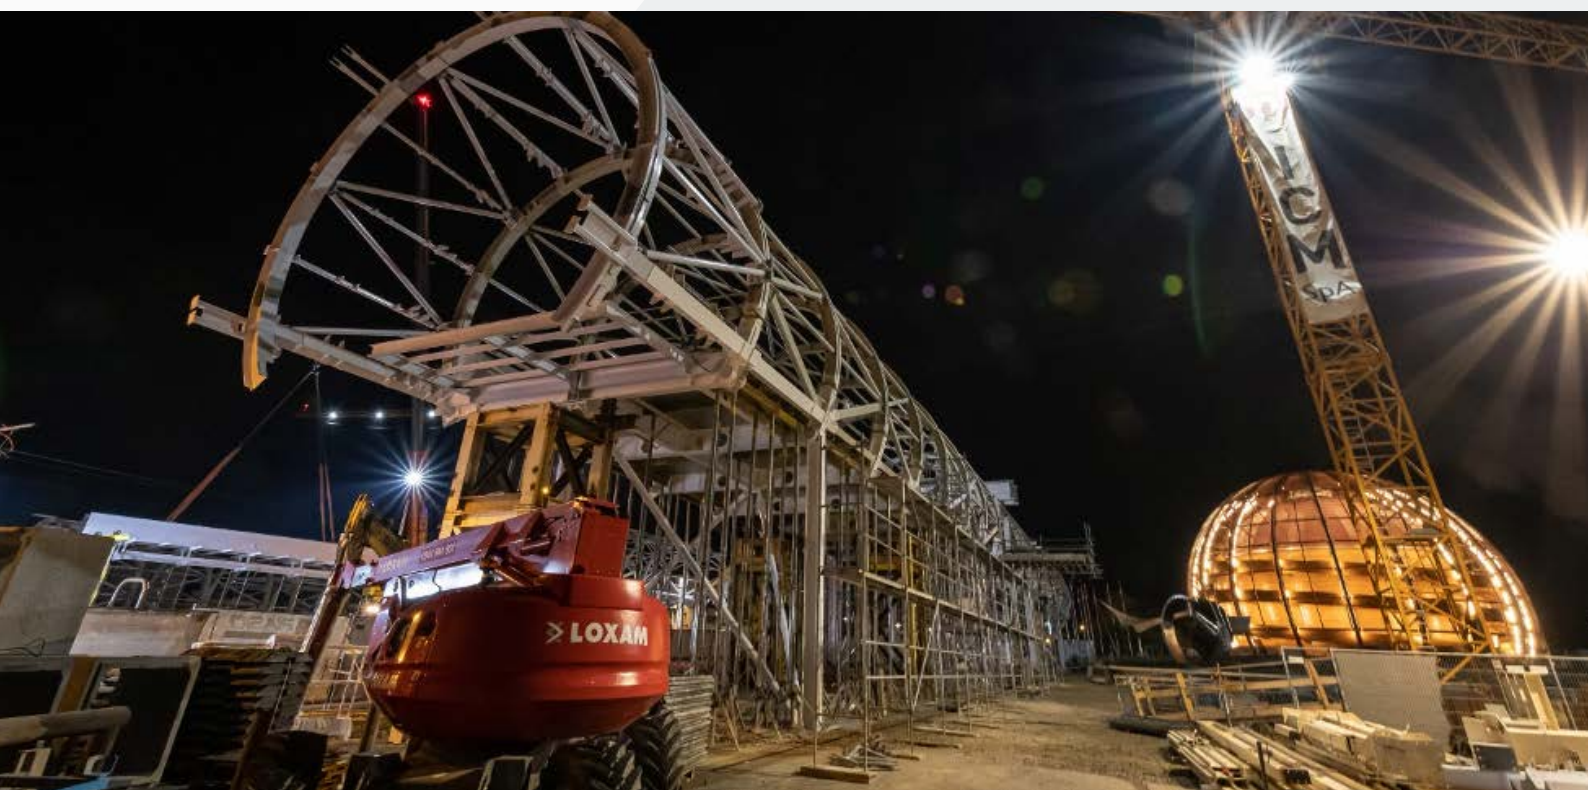

The amount of the works is approximately 24 million EUR.

CONSTRUCTION SITES ABROAD

SWITZERLAND, WORKING HARD AT CERN

CERN Science Gateway: We are working hard in Geneva for the new visitor center of the world's largest laboratory for particle physics. The project was designed by the architect Renzo Piano. Our team, together with Cimolai, is advancing with commitment and dedication for a work that is anything but trivial; a challenge that will offer something extremely sophisticated, beautiful and useful to the community.

KENYA, THE SMART CITY TAKES SHAPE

In Konza, the Smart City that the ICM Group is building, an avant-garde project that will see the rise of the “Silicon Savannah”, takes shape through the performance of the first batch of works. ICM is in the process of urbanizing the first 170 hectares of a Smart City to be equipped with roads, parks, aqueducts, waste disposal facilities, infrastructures. Konza is designed to be a landmark in the global panorama of smart cities, aiming to be ecologically, socially and economically sustainable. This makes us very proud!

THE RESIDENTIAL CENTRE IN CYPRUS

On the island of Cyprus, we have completed the realization of the luxury center Limassol Delmar, a residential and commercial project of “retail” type, located on the seafront. Three avant-garde towers, equipped also with a “wellness” area and hanging gardens. That’s extraordinary!

AUSTRIA, AN IMPRESSIVE JOB

The project “A26 Linzer Autobahn, first milestone” consists of two lots: one for the construction of a four-lane cable-stayed bridge over the Danube, being 385 meters long; and one for the construction of the connecting tunnels, on the north and south side of the bridge, for a total length of about 3.3 km. The project involves also other works such as the construction of operational centers and support buildings for the infrastructure supervision, the rock stabilization, as well as the implementation of safety measures. ICM is the authorized representative of a grouping consisting of an Austrian company and an Italian metal steel-work company. Works began in mid-November 2018, with an overall duration of 49 months.

NEWS

1

On November 25th, at the Municipal Theatre of the City of Vicenza, the book celebrating 100 years of the ICM Group was presented. A great history started on February 16th, 1921, when Giuseppe Maltauro founded his own construction company in Recoaro, a town in the province of Vicenza, in Italy, taking over the assets and the activities of a small cooperative company to which he belonged. An important goal made up of many individual stories and men who with determination, passion and optimism, all together, have make such a masterpiece come true!

A significant mass was also celebrated at the Vicenza Cathedral, a place that was rebuilt by the company after the war and where a gratitude plate is still present, to be seen before going up to the altar.

Here is a video summarizing the interviews from that beautiful evening.
