# NEW, COMPLETED & ONGOING WORKS

## LINZ-WELS RAILWAY LINE

The ICM Group with enthusiasm announces the award in Austria of the doubling of the Linz-Wels railway line, Lot 3.4. The customer is ÖBB (Austrian Railways) and the amount is close to 50 million EUR. Congratulations to those who contributed to this important victory that allows us to consolidate our presence in the Austrian market!

## A LOGISTICS HUB IN ARDEA

We completed in record time the construction of the logistics hub of about 40,000 m<sup>2</sup> at Ardea (Rome) on behalf of P3 Logistics Park, which started in July 2021, worth about 40 million EUR.

The building, where the Amazon company has established itself, was designed with a view to reducing environmental impact and will therefore obtain the BREEAM Excellent certification. Sincere congratulations to all those who have worked hard without hesitation and whose experience and talents made it possible to achieve this challenging goal!

## AUSTRIA – A26 “LINZER AUTOBAHN” MOTORWAY

The works related to the important Austrian project “A26 Linzer Autobahn, first milestone” motorway are moving forward very well. This project consists of two lots, one for the construction of a four-lane cable-stayed bridge over the Danube, being 385 meters long, and one for the construction of the connecting tunnels, on the north and south side of the bridge, for a total length of about 3.3 km. A compelling work, carried out by a set of motivated people and a group of resolute companies, of which ICM is the agent. Here below there is a video on the progress of the project!

# “TECHNOPOLIS” KONZA SMART CITY KENYA

Here below there is a nice video about the extraordinary project we are carrying out in Africa, near Nairobi. A challenge for tomorrow, as it is a smart city where the terms “sustainability” and “sense of community” will find an actual realization. Enjoy the continuation!

## CERN SCIENCE GATEWAY

Great teamwork is driving forward the starchitect Renzo Piano ambitious project, the CERN Science Gateway, involving ICM and Cimolai companies with their many collaborators, who, day after day, allow this idea to become a reality. Soon the five buildings will host, among other things, a conference hall, an exhibition hall, and a restaurant. Come on guys!!!

## HIGH SPEED ROUTE SEGMENT

The construction of the Milan-Verona HS/HC route segment continues steadily through the Cepav2 Consortium (of which ICM is a member with a 13,64% share), on behalf of RFI (Rete Ferroviaria Italiana). The entire work, currently among the largest being carried out in Italy, represents a great amount of experience for the ICM Group in both technical and organizational terms.

Here are some figures:

- ▾ Main line: **112 km**
- ▾ "Slow" line interconnections: **27 km**

for a total of about **139 km** distributed as follows:

- Embankments **74%** (102.87 km)
- Viaducts **8%** (11.12 km)
- Natural tunnels **5%** (6.95 km)
- Artificial tunnels **8%** (11.12 km)
- "U" shaped walls/trenches **5%** (6.95 km)

Here below there is a meaningful video shot on the occasion of the "Safety Day"

## VICENZA RING ROAD

In May, the Ambrosini underpass, part of the work on the Vicenza ring road, first section-first segment, was opened to traffic on behalf of Anas SpA. Another important piece of the SP 46 (Provincial Street 46) variant project, which affects the municipalities of “Vicenza” and “Costabissara” and is the completion of the ring road in the North area of Vicenza.

## NEWS

# 1 NEW PRESIDENT AND MANAGING DIRECTOR FOR INTEGRA SRL

Integra Srl, an ICM Group company operating in the field of services and systems for environmental protection and natural resource conservation since 1983, has a new President and Managing Director, Mr. Alessandro Caviezel. His statements after this important appointment are: "It is truly a welcome return, but with an eye toward the future and the new challenges that await Integra and the entire ICM Group". Congratulations and the best of luck!

## 2

Here are five young people who have joined the company with enthusiasm and a desire to learn: CATALIN BODEAN, GIACOMO CREMONESE, BEATRICE MURGIA, PAOLA BOLOGNA e FILIPPO SERTOLI.

## CATALIN

Purchasing Department Officer

*"Relationships have to be managed with care, and putting oneself in the shoes of others today is more crucial than ever; trust in any relationship helps make processes smooth and better".*

Catalin won the Italian championships in the hammer throw specialty and finds sport, with its values, to be an excellent metaphor for a successful working life: organization, time management, determination towards the set goals, and loyalty. He is a guy who always aims at giving his best to achieve satisfaction and, gradually, tasks of greater responsibility. In the company, he is in charge of the supplier qualification, with a focus on purchases related to technology and IT systems. He addresses everyone in a polite and proactive manner, and a kind and cooperative attitude comes back to him from his colleagues. Catalin truly believes that communication is about putting the people we interact with at ease and giving the right value to those in front of us, including using an appropriate language. Good luck then for a bright and rewarding future!

## GIACOMO

Plants and Systems Department Officer

*"I think that error is an inherent element of the learning process and, if accepted and analyzed, it can prove to be a treasure full of opportunities".*

Giacomo graduated from the University of Bologna with a degree in Electrical Energy Engineering and, since a few months ago, he has joined our Group following live several important Italian construction sites with reference to both design and implementation aspects. It is precisely in reference to the latter, he says, that we become well aware of problems that were previously unnoticeable on paper, which require inventiveness to find the most suitable solution. His managers are teaching him a lot in the mechanical and electrical field, and he is happy to learn something new and exciting every week. He looks forward to gaining more and more experience and autonomy over time so that tomorrow he can get to manage a frontline construction site; in the meantime, he trains himself in terms of patience, listening and mediation skills, as well as undoubtedly valuable skills to reach the goals he has set for himself. All ahead full!

## BEATRICE

Estimates Department Officer

*"I deem my strengths are being responsible, precise and humble. Instead, I am aware that I need to improve on the concept of flexibility".*

Beatrice is a young girl who will soon experience life at a construction site, especially following the technical side of it. After a degree in Civil Engineering from the University of Padua, with a focus in "technological design and building restoration", and an experience of study abroad in Prague, she is ready for this new adventure! She will try her hand at an ambitious job, which she has already been involved in, in terms of the design process, its improvement, and coordination with various architectural and design firms. Within the Company she fit in smoothly from day one, appreciating her boss ability to give confidence to young people and impart knowledge to them. Beatrice has a seraphic and calm disposition, and she will certainly bring harmony and balance within the team being created for this important challenge. Congratulations!

## PAOLA

Order Administration

*"Life on a construction site is unimaginable unless you experience it: very dynamic, engaging, concrete. The relationships that are formed are genuine and constructive!"*

Paola graduated with a degree in business administration from the Turin University before landing at one of ICM most prestigious foreign construction sites: the CERN Science Gateway in Geneva. The project is signed by the architect Renzo Piano and consists of the construction of the new visitor center (including an auditorium dedicated to Sergio Marchionne) and the creation of a forest. Her role is within the administrative area and she now handles the various accounting activities with ease. She is happy with the working environment that has been created within the construction site in progress, which she goes to every day with serenity, helpfulness to others and calm. She is learning to put herself more and more on the line by bringing all her reflective spirit and thoughtfulness to the table.

Dear Paola, we wish you all the best!

## FILIPPO

Document Controller

*"I enjoy this experience abroad a lot, and with responsibility and pragmatism, I put the best I have to offer into service!"*

After studying in Rome at La Sapienza University, with a degree in Civil Engineering and a Master Degree in Transport System Engineering, Filippo landed at ICM directly within an electrifying, multi-faceted and very challenging project: the CERN Science Gateway in Switzerland. The construction site is progressing at a rapid pace, in partnership with Cimolai, and day by day we can see its evolution, through the buildings that are being created, a walkway and a "tube" that will represent the accelerator and host exhibitions and displays. Filippo has been getting to know many new friendly people during the last months, with whom he is forming a close-knit group. Each week he discovers new aspects to manage (related to the design, red tape, and planning field), from which he is learning important lessons. He absorbs knowledge like a real sponge and tries to assimilate everything at the speed of light. Strong Filippo, you are doing very well!

# 3 ICM MALTAURO 1921-2021 THE CULTURE OF BUILDING

On May 27, the volume “ICM Maltauro 1921-2021 La Civiltà del Costruire” (ICM Maltauro 1921-2021 The Culture of Building), a book outlining the 100 years of our Company, edited by Paolo Madron and published by Marsilio Arte, was presented at the Olympic Academy in Vicenza. During the evening, sponsored by the Olympic Academy, the aim was to think about the characters and performance of Vicenza industry in the long run, starting from our corporate reality that from its origins in Recoaro has established itself over the years on the national and international market. A thriving development, made possible by the many people who have dedicated themselves to attain growth and success. The awareness of our past and the extraordinary wealth of the technical and production knowledge accumulated so far leads us to look confidently to the future, to better meet the challenges of innovation, sustainability, and social responsibility.

# 4 THE MINISTER DI MAIO VISITS SMART CITY KONZA

The Minister of Foreign Affairs Luigi Di Maio on the 14th of June visited, together with the Minister for Innovation and Young Policies of Kenya Joseph Mucheru, the construction site of the “Smart City” of Konza, the first technological and sustainable hub that we’re proudly building at 70 km from the capital Nairobi and which, when finished, will extend over a total area of 2000 hectares.

## NEW RECRUITS

NOME	FUNZIONE	PROGETTO/SEDE	SOCIETÀ
ALICE AIROLDI	MANAGEMENT CONTROL OFFICER	MILAN COIMA GIOIA 20	ICM
